The Journal of Primary Prevention is pleased to issue a Call for Papers for a Special Issue specifically focused on theoretical developments in gun violence research. This call includes original manuscripts broadly focusing on testing theories to explain gun violence (with theories coming from a variety of fields, including sociology, criminology, epidemiology, and public health), and the development of theoretical explanations of gun violence. Brief reports of pilot studies or preliminary research and literature reviews will also be considered. Prospective authors should contact Stephen Watts (sjwatts@memphis.edu) in order to indicate interest and/or ask questions about the issue. The final date for submissions for the Special Issue is April 15, 2019. To submit your research to the Journal of Primary Prevention, go to http://www.editorialmanager.com/jopp. Please include a cover letter indicating that you are responding to this specific call for papers, and notify Stephen Watts (sjwatts@memphis.edu) of your submission.

You may see several different calls for papers on the topic of gun violence from the Journal of Primary Prevention. Each call is from a different guest editor, specifies a unique topic related to this general theme, and manuscripts accepted in reference to each call will appear in their own special issue. We encourage you to submit as many manuscripts as you like in response to each call. Please be sure to specify the topic to which you are responding in your submissions, and coordinate with the appropriate guest editor as you submit.

Submission of a manuscript to the Special Issue does not guarantee review or acceptance. All submissions will receive a preliminary review by the editorial staff and those found to be of significant interest and merit will continue through the blind review process. In the event that we do not receive a sufficient number of papers that are appropriate for a special issue, we will consider each manuscript received on its own merits. If you would like to be considered as a potential reviewer for some of these submissions, please contact us.

The Journal of Primary Prevention is dedicated to a better understanding of primary prevention theory, practice, and research. Primary prevention involves preventing predictable and interrelated problems, protecting existing states of health and healthy functioning, and promoting psychosocial wellness for identified populations of people. The Journal of Primary Prevention publishes manuscripts that address the prevention of high risk behaviors, the reduction of associated problems and harms, and the promotion and maintenance of healthy functioning and psychosocial wellness. We publish a wide spectrum of studies that include the epidemiology and determinants of high risk behavior and environments, as well as the development, evaluation, translation, sustainability, and costs and benefits of preventive interventions.

We look forward to receiving your manuscript in the near future. If you have questions or comments about the subission or review process, please contact us at JOPP@UNC.edu. If you have questions about the content of your manuscripts or its suitability for this special issue, please contact guest editor Stephen Watts at sjwatts@memphis.edu or 901-678-5662.
